

HASAN BIYIK

SOFTWARE ENGINEER

- +90 544 628 77 83
- work.hahuaz@gmail.com
- İstanbul - Turkey
- portfolio.aliving.app
- linkedin.com/in/hahuaz
- youtube.com/hahuaz
- github.com/hahuaz

ACQUIRED SKILLS

- Infrastructure as code (AWS CDK)
- AWS serverless & on-prem
- Shopify platform & Liquid
- Typescript & Javascript & Nodejs
- React & Next & Vue
- HTML & CSS

HAVE EXPERIENCE

- Python & Django Framework
- Docker

WORK EXPERIENCE

SENIOR SOFTWARE ENGINEER Orion Innovation | Aug 2024 - Present

- Built an async payment workflow leveraging AWS Step Functions. The workflow complied with external service communication requirements using Kafka, EventBridge, and HTTP protocols. Thanks to its async nature, the workflow steps could be retried, postponed, or controlled externally.
- Optimized CI pipeline by replacing Makefile with esbuild, achieving faster build times.

SOFTWARE ENGINEER Akinon | Aug 2023 - Aug 2024

- I've implemented components in a monorepo structure to facilitate the integration of third-party apps into the admin panel.
- I've created a brand new UI Kit for use in over 5 e-commerce admin panels, and I also contributed to improving and fixing issues in existing admin panels.

SOFTWARE ENGINEER Uppercasebrands | Sep 2021 - Jul 2023

- I've managed the entire lifecycle of a SaaS application on the Shopify platform, taking charge of frontend, backend, and DevOps operations. Additionally, I developed two microservices as part of this application. Throughout these projects, my responsibilities ranged from designing the system architecture, implementing CI/CD processes and OAuth flows.
- Built multiple e-commerce websites by implementing Figma designs.

ACADEMIC ACHIEVEMENT

27,870th place in National University Entrance Exam among ~2 million Participants (2015)

SIDE PROJECTS

PORFTOLIO.ALIVING.APP

On this blog, I document my solutions in software development. I hope it becomes a reliable resource for others who may encounter similar challenges and contribute to the community.

ENGLISH.ALIVING.APP

The project uses AWS services for computing and distribution. It powered by the best-in-class AI tool in Azure to convert text to speech.

The thresholds of this project:

- Outlining system design diagram
- Statically generating over 1000 pages and serving those without compute source
- Creating single-table design on NoSQL database and adding search functionality

CDK EXAMPLES

It demonstrates my ability to develop and deploy infrastructure as code in a scalable and efficient manner by using AWS Cloud Development Kit (CDK).

CERTIFICATES & BADGES

- 2023/03/17 - AWS Architecting: Represents technical skills and knowledge of AWS concepts and services with a focus on designing solutions on AWS.
- 2023/02/16 - AWS Serverless: Signifies expertise in designing and implementing serverless applications.
